

Configuração Modo HotSpot

DIR-505

D-Link

Procedimentos para configuração Modo HotSpot

1- Para essa configuração o computador deve estar conectado ao DIR-505.

Obs.: Para configurar o DIR-505 como HotSpot, o mesmo não pode estar na mesma faixa de IP do seu roteador. Para configurar em HotSpot o mesmo pode ser acessado pela porta LAN, desde que o modo de operação esteja selecionado em HotSpot

3

2- Abra o navegador de internet e digite na barra de endereços http://192.168.0.1 e tecle Enter.

3- Logo em seguida abrirá uma janela de autenticação.

Digite o usuário e senha do equipamento:

User name: admin Password: (em branco). Clique em Login.

LOGIN	
Log in to the router :	
	User Name : admin 💌
	Password : Login

5- Desmarque a opção **Wi-FI Protected Setup,** depois clique em **Site Survery.**

	Use WPA or WPA2 mode to achieve a balance of strong security and best compatibility. This mode uses WPA for legacy clients while maintaining higher security with stations that are WPA2 capable. Also the strongest cipher that the client supports will be used. For best security, use WPA2 Only mode. This mode uses AES(CCMP) cipher and legacy stations are not allowed access with WPA security. For maximum compatibility, use WPA Only. This mode uses TKIP cipher. Some gaming and legacy devices work only in this mode.

6- Em **Site Survey** Irá apresentar uma tela com todas as redes disponíveis. Para que a conexão seja estabelecida com sucesso é necessário que o AP receba no mínimo "40%" de sinal, caso isso não aconteça pode ser que não conecte e se conectar pode ter vários problemas de queda de conexão com a rede.

Clique em **Connect**
