DPN-101G High Speed GPON Access Device

Power Adapter

If any of the above items are missing, please contact your reseller.

Note: *Using a power supply other than the one included with the DPN-101G may cause damage and void the warranty for this product.*

Introduction

The D-Link DPN-101G is a mini GPON ONT that uses a GPON link to deliver high-speed broadband. It's plug-and-play capabilities coupled with a small form factor make it ideal for residential applications. With bridging for Triple-play, users can use data-intensive Internet devices simultaneously without experiencing network delay. To give users better access to the Internet, the 10/100/1000 Mbps Ethernet is equipped with this GPON residential gateway. Supporting IEEE 802.3az the DPN-101G delivers energy efficient Ethernet to the home.

Safety Precautions

Take the following instructions to prevent the device from risks and damage caused by fire or electric power:

- Use the type of power marked by the volume label.
- Use the power adapter packed in the device package.
- Pay attention to the power load of the outlet or prolonged lines. An overburden power outlet or damaged lines and plugs may cause electric shock or fire accident. Check the power cords regularly. If you find any damage, replace it at once.
- Proper space left for heat dissipation is necessary to avoid damage caused by overheating to the device. The long and thin holes on the device are designed for heat dissipation to ensure that the device works normally. Do not cover these heat dissipation holes.
- Do not put this device close to a place where a heat source exists or high temperature occurs. Avoid the device from direct sunshine.
- Do not put this device close to a place where it is overdamp or watery. Do not spill any fluid on this device.
- Do not connect this device to any PCs or electronic products, unless our customer engineer or your broadband provider instructs you to do this, because any wrong connection may cause power or fire risk.
- Do not place this device on an unstable surface or support.

System Requirements

Recommended system requirements are as follows:

- A 10/100/1000 base-T Ethernet card is installed on your PC
- A Router or Switch. (connected to several PCs through one of Ethernet interfaces on the device)
- Operating system: Windows 98 SE, Windows 2000, Windows ME, Windows XP, Windows Vista, Windows 7, Windows 8, Windows 10
- Internet Explorer V5.0 or higher, Netscape V4.0 or higher, or Firefox 1.5 or higher

DHCP Server

Choose **Servives** > **DHCP**. The DHCP page that is displayed. The page as shown in the right figure appears.

Dynamic Host Configuration Protocol (DHCP) allows the individual PC to obtain the TCP/IP configuration from the centralized DHCP server. You can configure this router as a DHCP server or disable it. The DHCP server can assign IP address, IP default gateway and DNS server to DHCP clients. This router can also act as a surrogate DHCP server (DHCP Relay) where it relays IP address assignment from an actual DHCP server to clients. You can enable or disable DHCP server or DHCP Relay.
